

Pro Comm® PCX U-1002 Handheld Wireless System

OVERVIEW

Peavey proudly introduces its 100-channel, true diversity Pro Comm® PCX U-1002 wireless systems for live voice and guitar reproduction. PCX U-1002 systems are available with handheld or hands-free microphones and feature automatic channel scanning and control for user-friendly operation. The Pro Comm® PCX U-1002 employs AutoScan™ technology, which allows it to automatically search for non-interfering channels to resolve abrupt changes in frequency and maximize your wireless system performance. In addition to AutoScan on the receiver, the transmitter features CCS™ (Channel Control System), which sets the channel of the transmitter rapidly and precisely. A handheld, lightweight magnesium belt-pack transmitter utilizes an LCD that displays channel and battery status and group information. The compact PCX U-1002 receiver occupies one half-rack-space, includes XLR and 1/4" outputs and features a color LCD panel displaying function statuses.
